1. I AM INTERESTED IN PYTHON IMPRESSIONADOR

PART 1:

How great that you're interested in Python Impressionador. It is excellent for anyone who wants to stand out in the job market. 🤩

Here are some details 👇

PART 2:

Python Impressionador is a complete program that goes from beginner to advanced 🚀. The classes are 100% online and recorded, allowing you to watch them whenever it fits your schedule.

The course includes:

📹 More than 650 classes

⏳ 121 hours of content

🎯 9 real projects in the main areas of the market

✅ Certificate of completion

Not only that, but you will also have access to exclusive support for questions. Our team of specialists will reply within up to 24 business hours 🙋‍♂️. In addition, you can use our AI, HashBot 🤖, to quickly resolve questions.

PART 3:

Check out all the information and enroll through the link below 👇

https://lp.hashtagtreinamentos.com/pg-inscricao-python-impressionador-lespera?src=lespy-jv

If you have any questions about the information on the website, I'm here to help! 😊

2. PRICE OF PYTHON IMPRESSIONADOR

The price of Python Impressionador is R$1,497 upfront or 12 installments of R$124.75, with 12 months of access 🤩

And to make it even better, you receive Special bonuses 👇

🚀 Access to the Python Impressionador Community

🙋‍♂️ Question Support

📚 Learning Materials

✅ Soft Skills and Complementary Skills Courses

3. CAN YOU GIVE ME MORE DETAILS ABOUT HOW PYTHON IMPRESSIONADOR WORKS?

Python Impressionador is our complete training program, where we will teach you EVERYTHING you need to know about Python, starting from absolute zero and taking you all the way to an advanced level in Python.

Even if you have never programmed in your life or have had a terrible experience with programming before, this will work for you 🤩

There are more than 120 hours of highly complete training, with around 800 extremely step-by-step classes, with exercises in EVERY module. In addition, extra mini projects will be made available throughout the course so that you can practice and train everything you learn, as well as a complete workbook with all the course content explained step by step, so you can consult it whenever you want, plus, of course, a certificate of completion accepted by all companies, signed and recognized by the partners of Pure Life Products.

You will learn how to integrate Python with Excel, text files, Databases, integrate Python with SQL, Power BI, use Python on the Web, what we call web scraping, integrate Python with ArcGIS, APIs from various websites, email, SMS, create Systems and Graphical User Interfaces with Python and MUCH, MUCH more 🚀

4. WHAT PROJECTS ARE INCLUDED IN PYTHON IMPRESSIONADOR?

PART 1:

1️⃣ Process Automation Project:

We will build a real project, starting from scratch, to automate an entire company process, integrating databases, Excel, the internet, files on your computer, and automatically sending reports to dozens of email addresses with all the analyses.

2️⃣ Data Science and Artificial Intelligence Project:

A highly complete project covering every part of a real Data Science Project. We will go from the real challenge, solution development, data processing, exploratory analysis, and every step you need to follow until reaching a complete solution that uses Artificial Intelligence to make predictions and projections in an unmatched way.

3️⃣ Web Scraping (Data Scraping) Project:

You will learn how to create an automation that accesses different websites, automatically gathers information, fills out forms and searches, so you can compare prices and products, and consolidate everything into an automated alert.

PART 2:

4️⃣ Website Creation Project (Social Network using Flask):

We will use Flask, one of the most widely used Python website-building “tools” in the world and widely promoted and supported by Google itself, to create a social network with authentication, user profiles, interaction between users, photos, posts, a database, alerts, a server, and everything a complete web system has.

5️⃣ **Website Creation Project (Netflix Replica with Django):**

Here you will learn how to use Django, the Python framework used by technology giants such as Instagram and Globo.com, to create a Netflix replica, with an administrative system, users, movies, series, searches, and recommendations in a complete and educational way.

6️⃣ **Website Creation Project (Pinterest Replica):**

We will create a very visual and attractive Pinterest replica, going through every stage of creating a website, both the Frontend and Backend, and integrating all of it using Python.

PART 3:

7️⃣ **Game Creation Project (FlappyBird Game):**

Here you will learn, in an educational and step-by-step way, how to create a replica of the FlappyBird game, which was a hugely successful phenomenon a few years ago. From creating the scenery, score system, player movement, and much more.

8️⃣ **Application Creation Project (Sales Control App):**

Here we will create a mobile application using Kivy, a Python tool for application development that allows the same code to be used for computer systems as well as Android or iOS apps. You will learn how to create a sales system that interacts with an online database in real time, integrating teams and information in different locations.

9️⃣ **Complete Ecommerce Project (with Django):**

You will learn how to create a complete Ecommerce (Reserva's Ecommerce), with a store, sales banners, filters, and every feature of a real online store. In this project, you will also integrate with a real payment system, create an administrative area, export reports, and much more. It is the most complete ecommerce project of any course you have ever seen.

5. WHAT ARE THE MAIN AREAS I CAN PURSUE WITH PYTHON?

In fact, Python can be applied in any area or company. But we have 3 applications that can be used in any company:

- **Task automation:** Use Python to automate boring and repetitive tasks. Every company has some process/report/analysis that takes a lot of time but can be automated because it is standardized.
- **Data:** Build data analysis and data science projects and use your company's data to help with decision-making. Every company has a database and needs to rely on data to make decisions.
- **Building websites, applications, and systems.** Things that every company also needs.

This means that learning Python will open up a world of possibilities for you and make you much more sought after in the job market.

6. WHERE CAN I USE PYTHON?

Python is a very versatile programming language. You can use it in different areas of technology related to data analysis, data science, research, artificial intelligence, game development, task automation, among others 😊

This language allows you to automate tasks by integrating different types of programs, perform Web development, integrate with WhatsApp, email and the Web, work with computer graphics and artificial intelligence, game programming, and so on. There really are no limits. So you can be sure that Python can also help with your needs!

In the course, we show a wide variety of examples and the applications most commonly used in the market, so the course is 100% practical and gives you the necessary background to create your own code with confidence, such as the code that will help you with your specific tasks.

Remember that we offer a 30-day guarantee so that you can test our platform and check whether the content really suits your needs.

7. WHICH ENVIRONMENT/IDE IS USED IN THE PYTHON COURSE?

The IDEs used in the course to create Python code are Jupyter, VS Code, and PyCharm.

These are the most widely used environments for programming (Python, R, Julia, etc.), and we chose them because of their practicality and popularity among developers 😀

There are other IDEs you can use to create your code, such as Atom, Spyder, etc. In practice, the only thing that changes is the format of the programming environment, but all features work regardless of the environment chosen, so what you learn in the course can be replicated in any IDE.

8. IS DJANGO COVERED IN THE PYTHON COURSE?

In Python Impressionador, we have a module with a very complete Django project. In the module, of course, we show how to create websites using Django, one of the most widely used tools for creating websites with Python (along with Flask, which is also included in the course). In it, we will create, from absolute zero all the way to publishing it online, a copy of Netflix (simplified, of course, after all Netflix has thousands of programmers and you are only 1) 😂

9. SPECIFIC QUESTIONS ABOUT PYTHON WHEN WE DO COVER THE TOPIC IN OUR COURSE

PART 1:

So, Python is a very versatile language and has an endless number of applications. Even I am sometimes surprised by what Python can do 🤩

Regarding your specific question, inside our complete Python course we have classes that can help you learn more about the subject.

PART 2:

And in addition to several classes and practical examples, we have a support team for your questions inside our platform that can help you with guidance and tips for learning about the subject, and they reply within up to 24 business hours.

In any case, regardless of the application you want to learn, a strong foundation in Python is necessary, and our course will help you with exactly that 👊

I will leave the link here with detailed information about our Python course

🔴https://lp.hashtagtreinamentos.com/pg-inscricao-python-impressionador-lespera?src=lespy

10. SPECIFIC QUESTIONS ABOUT PYTHON WHEN WE DO NOT COVER THE TOPIC IN OUR COURSE

So, Python is a very versatile language and has an endless number of applications. Even I am sometimes surprised by what Python can do! 🤩

Regarding your application, we do not have a specific class on it. I would even say it is a very specific topic and difficult to find something ready-made for you to apply!

In fact, there are many things in Python that we need to adapt from similar examples. The challenge is finding those similar examples and some video tutorial explaining how to do it 👊

But one thing I can guarantee you: in our complete Python course we have a series of practical classes on a wide variety of topics that can help you build something along the lines of what you need.

In addition to several classes and practical examples, we have question support that can help you with guidance and tips for learning about the topic.

In any case, regardless of the application you want to learn, a strong foundation in Python is necessary, and our course will help you with exactly that!

What do you think about learning a little more about Python Impressionador? 😊

11. WOULD PROGRAMMING IN PYTHON BE USEFUL FOR GAMES? WHAT PATH SHOULD I FOLLOW AFTER LEARNING THE BASICS OF PYTHON? HOW CAN I GET A JOB WITH PYTHON?

The syntax of the Python programming language is the set of rules that defines how a Python program will be written and interpreted (both by the runtime system and by humans).

Many people believe they have learned Python and complain that they cannot get a job or get into a company. But usually they have only learned the basics of writing code.

After you learn the basics of Python, the focus is on building practical projects with Python.

Learning how to use those lines of code and syntax to solve real company challenges, integrate with tools companies use, create automation projects, and build websites.

12. “I CAN CREATE SEVERAL APPLICATIONS IN PYTHON, BUT I STILL CAN'T GET A JOB”

If you are already able to create projects in Python, such as replicas of famous websites, automations, and data analysis projects, you have already done the hardest part, which is understanding and building the projects companies actually need.

What is missing now is getting yourself in front of companies and creating a project portfolio and a résumé that help you stand out. And in our complete Python Impressionador course, we help you with exactly that 🤩

13. “HOW CAN I CREATE MY PROJECT PORTFOLIO?”

As a student of the Python Impressionador course, you will create 9 complete projects in the main areas of the job market 🤩

In fact, using LinkedIn or Github, you can make these projects and code available in an organized way, with a post or file explaining exactly what you did in the project, what the challenge was, how you overcame the challenge, the step-by-step process, and why at a certain point you did x or y.

The goal is to explain it in an educational way, as if you were explaining it to someone who does not know Python. This makes it possible to attract the attention of potential recruiters.

14. MY COMPANY DOES NOT USE PYTHON. DO YOU THINK I SHOULD STILL LEARN IT?

Absolutely. Because this would be an even greater opportunity for you to stand out in your company.

If people do not understand what Python can do and its potential, sometimes by doing even the simplest things faster, you will be able to attract more attention and stand out even more 🚀

15. WOULD PROGRAMMING IN PYTHON BE USEFUL FOR GAMES?

Yesss, Python applies to practically any area of the market because it is an extremely versatile language. And one of the most common applications is exactly Game Development 🤩

Since you are looking to stand out with Python, my suggestion would be our Python Impressionador course, which goes from the basic level to the most advanced level in Python. Showing you absolutely EVERYTHING you need to know about Python ✅

In fact, in the course we have an exclusive and very step-by-step module on Game Development, where you can build your own project 💪

What do you think about taking a look at the complete course syllabus? Then tell me what you thought!

https://tinyurl.com/ementa-python

16. “I WANT TRAINING WITH PYTHON, DJANGO AND KIVY”:

We have the complete Python Impressionador course, which goes from the basic level to the most advanced level. Showing you absolutely EVERYTHING about Python 🤩

In fact, in the course you will learn how to create 5 highly complete projects in the main areas. Among them, creating a mobile application with Kivy and developing a website with Django 👏

What do you think about taking a look at the complete course syllabus? 👇

https://tinyurl.com/ementa-python

Then tell me what you thought 🤗

17. IS THERE A PYTHON OBJECT-ORIENTED PROGRAMMING COURSE?

Very cool that you're interested. I think it would be great for you to check out our complete course: Python Impressionador, which goes from the basic level to the most advanced level. Showing you absolutely EVERYTHING about Python 🤩

In the course, we have two exclusive modules on Object-Oriented Programming:

- 🔹 Modules, Libraries, and Introduction to Object-Oriented Programming.
- 🔹 Complete Object-Oriented Programming - Classes and Methods.

What do you think about taking a look at the course syllabus? 👇

https://tinyurl.com/ementa-python

Then tell me what you thought? 😊

18. DOES THE PYTHON COURSE TEACH PROCESS AUTOMATION IN MORE DEPTH WITH SELENIUM?

In the Python Impressionador course, you will learn how to create projects in each of the major areas where Python is applied. Among them, process automation. We will build a real project, starting from absolute zero, to automate an entire company process, integrating databases, Excel, the internet, files on your computer, and automatically sending reports to dozens of email addresses with all the analyses 👊

In addition, we have an exclusive module, “Python Integration with the Web (Web Scraping with Selenium),” covering topics such as:

- Integrating Python with the Web using Selenium
- Differences when using Selenium in Google Colab
- Useful Selenium Methods
- Filling Out Forms with Selenium
- Alternative Selenium Method that Always Works
- Python and Web Integration Challenge
- Challenge - Automating WhatsApp Message Sending
- Running Javascript Scripts through Selenium (scrolling on the screen)
- Exception Challenge - Chaos in Selenium
- Process Automation with Selenium

What do you think about taking a look at the complete course syllabus?

https://tinyurl.com/ementa-python

Then tell me what you thought 😊

19. I WANT TO KNOW HOW TO STAND OUT WITH PYTHON IN FINANCE AND INVESTMENT PORTFOLIO OPTIMIZATION

Very cool that you're interested. Since you are looking to stand out with Python, my suggestion would be our Python Impressionador course 🤩

In it, you will learn not only the basic, intermediate, and advanced fundamentals of Python, but also many automations, how to integrate Python with databases, and MUCH more.

In fact, we have an exclusive and very cool module called “Python Integration for Finance,” covering the topics:

- Python for Finance
- IBOV Return and Moving Average
- Getting Portfolio Quotes with Python
- Handling DataFrame Import Problems and Normalization
- Creating Portfolio Value and Pulling Ibovespa
- Comparing the Portfolio with Ibovespa

- Financial Analysis with Python

What do you think about taking a look at the complete course syllabus?

https://tinyurl.com/ementa-python

20. HOW DO I PREPARE A FREELANCE QUOTE IN PYTHON?

First of all, it is important that you learn Python. The next step is to define what is required to create this quote and, from there, learn the Python topics that can help you.

For example, if you need to read an Excel spreadsheet, it is useful to know the Pandas library in Python. But if you want to create an application for this quoting system, you will need to learn Kivy in Python 👊

So, in summary, Python is the tool. But it is important to emphasize that you must define the stages of your project, and that has nothing to do with Python, but rather with your project's requirements 😊

21. IS THERE A FREELANCE WEBSITE FOR PYTHON?

At the link below, you can check out and discover the 10 best websites for Python freelance work ⬇️

https://recruitment.com/recommendations/hire-python-developers

22. WEBSITE WITH HTML, CSS, JS OR PYTHON? WHAT ARE THE DIFFERENCES BETWEEN FRONT END AND BACK END?

Every website has 2 parts: front end and back end. The Front End is the part that loads in the browser, meaning what the user is seeing. Today we do not use Python for that; we use Html, css, jv, etc.

The Back End is the part where we control the database, where we manage how the website will work, the features, what the website will have. That is where we use Python and can use Django.

23. WHAT IS THE DIFFERENCE AND SIMILARITY BETWEEN THE SELENIUM AND PLAYWRIGHT LIBRARIES?

Both allow you to achieve their “main purpose”: web automation, being able to automate websites, fill out forms, login fields, and password fields.

The big difference is that Playwright usually runs faster and has faster interactions.

The way they work is similar, but the line of code is also different. However, Selenium has the advantage that, because it has been used for longer, it is easier to find information on the internet, especially because it can also be used with other programming languages.

24. WHAT IS THE MINIMUM COMPUTER CONFIGURATION TO USE PYTHON?

To program in Python, you do not need a very powerful computer. What is important is that it is a reasonably modern computer.

A good minimum specification would be an i3 processor and at least 4GB of RAM, considering that you will not only run Python code but other programs as well. 😊

25. HOW DO I DOWNLOAD PYTHON?

On our YouTube channel, we have a video explaining “The easy and fast way to install Python on your computer”

https://www.youtube.com/watch?v=hQayuyeEMy0

My tip is to follow the step-by-step instructions from our specialist Lira 😊

26. I AM HAVING DIFFICULTY DOWNLOADING JUPYTER/ANACONDA PACKAGE FOR PYTHON PROGRAMMING

We cannot answer technical questions here; this is a benefit available only to students of our complete courses. If you are already our student, you can send your question through the class platform and our team of experts will be able to help you, okay? 👊

If you are not our student, I have a tip that will help you! 🤩

On our YouTube channel, we have a video called “Installing Jupyter - Anaconda Package for Python Programming”

https://www.youtube.com/watch?v=_eK0z5QbpKA&t=13s

My suggestion would be to watch and rewatch the video, following Lira's step-by-step instructions exactly 👍
